

DonorsChoose

DonorsChoose.org receives hundreds of thousands of project proposals each year for classroom projects in need of funding. Right now, a large number of volunteers is needed to manually screen each submission before it's approved to be posted on the DonorsChoose.org website.

Next year, DonorsChoose.org expects to receive close to 500,000 project proposals. As a result, there are three main problems they need to solve:

- How to scale current manual processes and resources to screen 500,000 projects so that they can be posted as quickly and as efficiently as possible
- How to increase the consistency of project vetting across different volunteers to improve the experience for teachers
- How to focus volunteer time on the applications that need the most assistance

The goal of the competition is to predict whether or not a DonorsChoose.org project proposal submitted by a teacher will be approved, using the text of project descriptions as well as additional metadata about the project, teacher, and school. DonorsChoose.org can then use this information to identify projects most likely to need further review before approval.

About the DonorsChoose Data Set

The `train.csv` data set provided by DonorsChoose contains the following features:

Feature	Descr
<code>project_id</code>	A unique identifier for the proposed project. Example: p0:

Feature		Description	Example
project_title	•	Title of the project.	Art Will Make You Happy
	•		First Grade
project_grade_category		Grade level of students for which the project is targeted. One of the following enumerated values:	
	•		Grades Pre-K - 2
	•		Grades 1 - 2
	•		Grades 3 - 5
project_subject_categories		One or more (comma-separated) subject categories for the project from the following enumerated list of values:	
	•		Applied Learning
	•		Care & Health
	•		Health & Safety
	•		History & Civics
	•		Literacy & Language
	•		Math & Science
	•		Music & The Arts
	•		Special Interest
	•		World Languages
school_state	•		Music & The Arts
	•		Literacy & Language, Math & Science
school_state		State where school is located (Two-letter U.S. postal code) (https://en.wikipedia.org/wiki/List_of_U.S._state_abbreviations#Postal_codes)	Example: CA

Feature	Description
<code>project_subject_subcategories</code>	One or more (comma-separated) subject subcategories for the project. Example: Literature & Writing, Social Sciences
<code>project_resource_summary</code>	An explanation of the resources needed for the project. Example: My students need hands on literacy materials to make sensory needs!<
<code>project_essay_1</code>	First application
<code>project_essay_2</code>	Second application
<code>project_essay_3</code>	Third application
<code>project_essay_4</code>	Fourth application
<code>project_submitted_datetime</code>	Datetime when project application was submitted. Example: 2016-01-12T12:43:56Z
<code>teacher_id</code>	A unique identifier for the teacher of the proposed project. Example: bdf8baa8fedef6bfeec7ae4ff1c0
<code>teacher_prefix</code>	Teacher's title. One of the following enumerated values: <ul style="list-style-type: none"> • • • • • •
<code>teacher_number_of_previously_posted_projects</code>	Number of project applications previously submitted by the same teacher. Example: 1

* See the section **Notes on the Essay Data** for more details about these features.

Additionally, the `resources.csv` data set provides more data about the resources required for each project. Each line in this file represents a resource required by a project:

Feature	Description
id	A <code>project_id</code> value from the <code>train.csv</code> file. Example: p036502
description	Description of the resource. Example: Tenor Saxophone Reeds, Box of 25
quantity	Quantity of the resource required. Example: 3
price	Price of the resource required. Example: 9.95

Note: Many projects require multiple resources. The `id` value corresponds to a `project_id` in `train.csv`, so you use it as a key to retrieve all resources needed for a project:

The data set contains the following label (the value you will attempt to predict):

Label	Description
<code>project_is_approved</code>	A binary flag indicating whether DonorsChoose approved the project. A value of 0 indicates the project was not approved, and a value of 1 indicates the project was approved.

Notes on the Essay Data

Prior to May 17, 2016, the prompts for the essays were as follows:

- **project_essay_1:** "Introduce us to your classroom"
- **project_essay_2:** "Tell us more about your students"
- **project_essay_3:** "Describe how your students will use the materials you're requesting"
- **project_essay_3:** "Close by sharing why your project will make a difference"

Starting on May 17, 2016, the number of essays was reduced from 4 to 2, and the prompts for the first 2 essays were changed to the following:

- **project_essay_1:** "Describe your students: What makes your students special? Specific details about their background, your neighborhood, and your school are all helpful."
- **project_essay_2:** "About your project: How will these materials make a difference in your students' learning and improve their school lives?"

For all projects with project_submitted_datetime of 2016-05-17 and later, the values of project_essay_3 and project_essay_4 will be NaN.

My students are English learners that are working on English as their second or third languages. We are a melting pot of refugees, immigrants, and native-born Americans bringing the gift of language to our school. \r\n\r\n We have over 24 languages represented in our English Learner program with students at every level of mastery. We also have over 40 countries represented with the families within our school. Each student brings a wealth of knowledge and experiences to us that open our eyes to new cultures, beliefs, and respect. \r\n\r\n "The limits of your language are the limits of your world." -Ludwig Wittgenstein Our English learner's have a strong support system at home that begs for more resources. Many times our parents are learning to read and speak English along side of their children. Sometimes this creates barriers for parents to be able to help their child learn phonetics, letter recognition, and other reading skills. \r\n\r\n By providing these dvd's and players, students are able to continue their mastery of the English language even if no one at home is able to assist. All families with students within the Level 1 proficiency status, will be offered to be a part of this program. These educational videos will be specially chosen by the English Learner Teacher and will be sent home regularly to watch. The videos are to help the child develop early reading skills. \r\n\r\n Parents that do not have access to a dvd player will have the opportunity to check out a dvd player to use for the year. The plan is to use these videos and educational dvd's for the years to come for other EL students. \r\n\r\n

=====

The 51 fifth grade students that will cycle through my classroom this year all love learning, at least most of the time. At our school, 97.3% of the students receive free or reduced price lunch. Of the 560 students, 97.3% are minority students. \r\n\r\n The school has a v

ibrant community that loves to get together and celebrate. Around Halloween there is a whole school parade to show off the beautiful costumes that students wear. On Cinco de Mayo we put on a big festival with crafts made by the students, dances, and games. At the end of the year the school hosts a carnival to celebrate the hard work put in during the school year, with a dunk tank being the most popular activity. My students will use these five brightly colored Hokki stools in place of regular, stationary, 4-legged chairs. As I will only have a total of ten in the classroom and not enough for each student to have an individual one, they will be used in a variety of ways. During independent reading time they will be used as special chairs students will each use on occasion. I will utilize them in place of chairs at my small group tables during math and reading times. The rest of the day they will be used by the students who need the highest amount of movement in their life in order to stay focused on school.

Whenever asked what the classroom is missing, my students always say more Hokki Stools. They can't get their fill of the 5 stools we already have. When the students are sitting in group with me on the Hokki Stools, they are always moving, but at the same time doing their work. Anytime the students get to pick where they can sit, the Hokki Stools are the first to be taken. There are always students who head over to the kidney table to get one of the stools who are disappointed as there are not enough of them.

We ask a lot of students to sit for 7 hours a day. The Hokki stools will be a compromise that allow my students to do desk work and move at the same time. These stools will help students to meet their 60 minutes a day of movement by allowing them to activate their core muscles for balance while they sit. For many of my students, these chairs will take away the barrier that exists in schools for a child who can't sit still.

=====

How do you remember your days of school? Was it in a sterile environment with plain walls, rows of desks, and a teacher in front of the room? A typical day in our room is nothing like that. I work hard to create a warm inviting themed room for my students look forward to coming to each day.

My class is made up of 28 wonderfully unique boys and girls of mixed races in Arkansas. They attend a Title I school, which means there is a high enough percentage of free and reduced-price lunch to qualify. Our school is an "open classroom" concept, which is very unique as there are no walls separating the classrooms. These 9 and 10 year-old students are very eager learners; they are like sponges, absorbing all the information and experiences and keep on wanting more. With these resources such as the comfy red throw pillows and the whimsical nautical hanging decor and the blue fish nets, I will be able to help create the mood in our classroom setting to be one of a themed nautical environment. Creating a classroom environment is very important in the su

ccess in each and every child's education. The nautical photo props will be used with each child as they step foot into our classroom for the first time on Meet the Teacher evening. I'll take pictures of each child with them, have them developed, and then hung in our classroom ready for their first day of 4th grade. This kind gesture will set the tone before even the first day of school! The nautical thank you cards will be used throughout the year by the students as they create thank you cards to their team groups.\r\n\r\nYour generous donations will help me to help make our classroom a fun, inviting, learning environment from day one.\r\n\r\nIt costs lost of money out of my own pocket on resources to get our classroom ready. Please consider helping with this project to make our new school year a very successful one. Thank you!nannan

=====
My kindergarten students have varied disabilities ranging from speech and language delays, cognitive delays, gross/fine motor delays, to autism. They are eager beavers and always strive to work their hardest working past their limitations. \r\n\r\nThe materials we have are the ones I seek out for my students. I teach in a Title I school where most of the students receive free or reduced price lunch. Despite their disabilities and limitations, my students love coming to school and come eager to learn and explore. Have you ever felt like you had ants in your pants and you needed to groove and move as you were in a meeting? This is how my kids feel all the time. They want to be able to move as they learn or so they say. Wobble chairs are the answer and I love them because they develop their core, which enhances gross motor and in turn fine motor skills. \r\nThey also want to learn through games, my kids don't want to sit and do worksheets. They want to learn to count by jumping and playing. Physical engagement is the key to our success. The number toss and color and shape mats can make that happen. My students will forget they are doing work and just have the fun a 6 year old deserves.nannan

=====
The mediocre teacher tells. The good teacher explains. The superior teacher demonstrates. The great teacher inspires. -William A. Ward\r\n\r\nMy school has 803 students which is makeup is 97.6% African-American, making up the largest segment of the student body. A typical school in Dallas is made up of 23.2% African-American students. Most of the students are on free or reduced lunch. We aren't receiving doctors, lawyers, or engineers children from rich backgrounds or neighborhoods. As an educator I am inspiring minds of young children and we focus not only on academics but one smart, effective, efficient, and disciplined students with good character. In our classroom we can utilize the Bluetooth for swift transitions during class. I use a speaker which doesn't amplify the sound enough to receive

ve the message. Due to the volume of my speaker my students can't hear videos or books clearly and it isn't making the lessons as meaningful. But with the bluetooth speaker my students will be able to hear and I can stop, pause and replay it at any time.\r\nThe cart will allow me to have more room for storage of things that are needed for the day and has an extra part to it I can use. The table top chart has all of the letter, words and pictures for students to learn about different letters and it is more accessible.nannan

```

Assignment 5: Logistic Regression

1. [Task-1] Logistic Regression(either SGDClassifier with log loss, or LogisticRegression) on these feature sets

- **Set 1**: categorical, numerical features + project_title(BOW) + preprocessed_eassay (BOW with bi-grams with min_df=10 and max_features=5000)
- **Set 2**: categorical, numerical features + project_title(TFIDF)+ preprocessed_eassay (TFIDF with bi-grams with min_df=10 and max_features=5000)
- **Set 3**: categorical, numerical features + project_title(AVG W2V)+ preprocessed_eassay (AVG W2V)
- **Set 4**: categorical, numerical features + project_title(TFIDF W2V)+ preprocessed_essay (TFIDF W2V)

2. Hyper paramter tuning (find best hyper parameters corresponding the algorithm that you choose)

- Find the best hyper parameter which will give the maximum [AUC](https://www.appliedaicourse.com/course/applied-ai-course-online/lessons/receiver-operating-characteristic-curve-roc-curve-and-auc-1/) (<https://www.appliedaicourse.com/course/applied-ai-course-online/lessons/receiver-operating-characteristic-curve-roc-curve-and-auc-1/>) value
- Find the best hyper paramter using k-fold cross validation or simple cross validation data
- Use gridsearch cv or randomsearch cv or you can also write your own for loops to do this task of hyperparameter tuning

3. Representation of results

- You need to plot the performance of model both on train data and cross validation data for each hyper parameter, like shown in the figure.

- Once after you found the best hyper parameter, you need to train your model with it, and find the AUC on test data and plot the ROC curve on both train and test.

- Along with plotting ROC curve, you need to print the [confusion matrix](https://www.appliedaicourse.com/course/applied-ai-course-online/lessons/confusion-matrix-tp-r-fpr-fnr-tnr-1/) (<https://www.appliedaicourse.com/course/applied-ai-course-online/lessons/confusion-matrix-tp-r-fpr-fnr-tnr-1/>) with predicted and original labels of test data points. Please visualize your confusion matrices using [seaborn heatmaps](#).

	Predicted: NO	Predicted: YES
Actual: NO	TN = ??	FP = ??
Actual: YES	FN = ??	TP = ??

(<https://seaborn.pydata.org/generated/seaborn.heatmap.html>)

4. [Task-2] Apply Logistic Regression on the below feature set **Set 5** by finding the best hyper parameter as suggested in step 2 and step 3.
5. Consider these set of features **Set 5** :

- **school_state** : categorical data
- **clean_categories** : categorical data
- **clean_subcategories** : categorical data
- **project_grade_category** : categorical data
- **teacher_prefix** : categorical data
- **quantity** : numerical data
- **teacher_number_of_previously_posted_projects** : numerical data
- **price** : numerical data
- **sentiment score's of each of the essay** : numerical data
- **number of words in the title** : numerical data
- **number of words in the combine essays** : numerical data

And apply the Logistic regression on these features by finding the best hyper paramter as suggested in step 2 and step 3

6. Conclusion

- You need to summarize the results at the end of the notebook, summarize it in the table format. To print out a table please refer to this prettytable library [link \(http://zetcode.com/python/prettytable/\)](http://zetcode.com/python/prettytable/)

Vectorizer	Model	Hyper parameter	AUC
BOW	Brute	7	0.78
TFIDF	Brute	12	0.79
W2V	Brute	10	0.78
TFIDFW2V	Brute	6	0.78

Note: Data Leakage

1. There will be an issue of data-leakage if you vectorize the entire data and then split it into train/cv/test.
2. To avoid the issue of data-leakage, make sure to split your data first and then vectorize it.
3. While vectorizing your data, apply the method `fit_transform()` on you train data, and apply the method `transform()` on cv/test data.
4. For more details please go through this [link. \(https://soundcloud.com/applied-ai-course/leakage-bow-and-tfidf\)](https://soundcloud.com/applied-ai-course/leakage-bow-and-tfidf)

2. Logistic Regression

Some code blocks are taken from previous assignments. And some used the code present in original file ('5_DonorsChoose_LR.ipynb') which is mentioned in comments.

Following Code blocks provided by me.

Adding a column `summary_numeric_bool` instead of `project_resource_summary` column which tells if resource summary has a number in it

```
In [49]: # ref: https://stackoverflow.com/questions/4138202/using-isdigit-for-floats
def nums_in_str(text):
    """
    Returns list of numbers present in the given string. Numbers := floats ints etc.
    """
    result = []
    for s in text.split():
        try:
            x = float(s)
            result.append(x)
        except:
            continue
    return result
```

```
In [50]: print(nums_in_str('HE44LLO 56 are -89 I 820.353 in -78.39 what .293 about 00'))

[56.0, -89.0, 820.353, -78.39, 0.293, 0.0]
```

```
In [51]: numbers_in_summary = np.array([len(nums_in_str(s)) for s in project_data['project_resource_
project_data['summary_numeric_bool'] = list(map(int, numbers_in_summary>0))
```

Taking Relevant columns as X (input data to model) and y (output class label)

In [52]: `project_data.columns`

Out[52]: Index(['Unnamed: 0', 'id', 'teacher_id', 'teacher_prefix', 'school_state',
 'project_submitted_datetime', 'project_grade_category', 'project_title',
 'project_essay_1', 'project_essay_2', 'project_essay_3',

3. Conclusion

In [124]: *# Please compare all your models using Prettytable library*

```
In [137]: from prettytable import PrettyTable
table = PrettyTable()
table.field_names = ['SET', 'C-HyperParameter', 'Train AUC', 'Test AUC']
table.add_row(['Bag of Words', 0.002, np.round(bow_result[0.002]['train_auc'], 3), \
              np.round(bow_result[0.002]['test_auc'], 3)])
table.add_row(['TfIdf', 0.2, np.round(tfidf_result[0.2]['train_auc'], 3), \
              np.round(tfidf_result[0.2]['test_auc'], 3)])
table.add_row(['Average Word2Vec', 1, np.round(avgw2v_result[1]['train_auc'], 3), \
              np.round(avgw2v_result[1]['test_auc'], 3)])
table.add_row(['TfIdf Word2Vec', 0.3, np.round(tfidfw2v_result[0.3]['train_auc'], 3), \
              np.round(tfidfw2v_result[0.3]['test_auc'], 3)])
table.add_row(['Numerical, Category and Sentiment data', 0.02, np.round(task2_result[0.02][
              np.round(task2_result[0.02]['test_auc'], 3)])
print(table)
```

SET	C-HyperParameter	Train AUC	Test AUC
Bag of Words	0.002	0.775	0.732
TfIdf	0.2	0.795	0.728
Average Word2Vec	1	0.737	0.714
TfIdf Word2Vec	0.3	0.732	0.712
Numerical, Category and Sentiment data	0.02	0.65	0.64

SUMMARY:

- **Bag of Words and TfIdf models did good than Word2Vec models. Although the gap between train and test auc is slightly less for Word2Vec**
- **Using only numerical, categorical and Sentiment data didnt do much good. The performance is lower than all other models. If time performance is very important Word2Vec can be taken as it has much less columns than BOW and TFIDF models. And when it comes to time, BOW and TFIDF models took lot of time to train on. And time taken for predicting also is slightly longer than others**
- **When compared to other machine learning models i.e. Naive Bayes, KNN etc, Logistic Regression did well than those models.**
